

Floor Care Guide Stripping

Floor Care Guide: Stripping of Water Based Floor Polishes

Preparation of the Area

- Prepare the surface area first by making a note of where all the items in the room are located.
- Put out warning signs and pen windows.
- Try and use materials such as duct tape to cordon off areas that should not be stripped.
- With care pick away any debris from the floor, then dust mop the whole area.

Floor Stripping Technique

- Apply the stripping solution to the floor using a mop and bucket ensuring the correct dilution rates are adhered to and allow to soak for approximately for 10 minutes.
- Scrub the floor using the rotary floor-cleaning machine (ensure operative is trained in correct use) with a black stripping pad.
- To ensure total coverage, scrub in one direction and then reverse.
- Remove any resultant slurry with a wet vacuum and splashes using a cloth.
- Remove any residue with a mop and clean water.
- Allow the floor to air dry

Floor Seals and Polish

It is important to select the correct seal or polish to apply to the floor once the floor has been correctly stripped. There are 3 main factors that should be taken into account.

1. The type of floor surface.
2. The method of maintaining the floor.
3. The type and Quantity of footfall.

Equipment Required: -

Caution Signage (Suggest products: - 63200)

Wet Vacuum

Kentucky Mop (Suggest products: - 55617)

Kentucky Handle (Suggested products: - 55621)

Bucket and Wringer (Suggested products: - 12367)

Slow Speed Rotary Floor Cleaning Machine (Suggested products: - Taski Ergo Disk 200 / 238 / 165(NW codes 17055/17037/70196))

Floor Sweeper (Suggested product: - 66860 / 70200)

PPE Required: -

Gloves (Suggested products: - 57041)

Goggles (Suggested products: - 66689)

Coveralls

Products Required: -

4 Hygiene Rinse Free Polish Stripper (Product Code: - 11009)

Carefree Speed Stripper (Product Code: - 23860)
